

Jamb Skid

Product Release Date: October 2019

Product Summary

Endura Products has recently designed a jamb skid to assist with the movement of prehung door units around your shop. To further enhance this component, the jamb skid has three cutouts on the side to properly locate fasteners when securing jambs to sill substrates. The jamb skid is available effective immediately.

Jamb Skid Availability

Jamb Skids are available in two sizes, 4-9/16" and 6-9/16". The 4-9/16" option is also available in a wide bottom width that supports the sill edge.

Jamb skids work as a template with the following sill substrates:

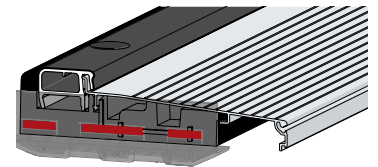

- Z-FEN
- FN
- RDS™
- Lineal Hybrid

The new jamb skid can be utilized in three ways:

- **Template Only:** used only to easily locate fasteners.
- **Skid Only:** used to transport your doors around your shop with simplicity.
- **Template & Skid:** used as a combination of locating fasteners and transporting prehung door units around your shop.
