

# Endura Staple-On Door Bottom for Z-Articulating Cap Sill®

## Installation Instructions

### TOOLS AND SUPPLIES:

- Phillips Screwdriver or Drill
- Putty Knife
- Tape Measure
- Marker
- Cutting Tool (Chop/Miter Saw **strongly** recommended)
- Rubber Mallet
- Staple Gun
- 1/2" x 1/2" Staples
- Flat workspace, large enough for door panel

### STEP 1: REMOVE EXISTING DOOR PANEL FROM THE FRAME - WE RECOMMEND HAVING ANOTHER PERSON ASSIST WITH THIS STEP

a. Open the door and locate the hinges. Using a Phillips screwdriver or drill remove the screws from the hinge plate on the jamb.

b. When door is loose from frame, carry it to a flat workspace where the panel can be laid horizontally.

### STEP 2: REMOVE THE OLD DOOR BOTTOM FROM THE PANEL

a. Remove the old door bottom from the door panel. Use a flathead screwdriver to pry the end of the door bottom off the panel.

b. Remove any old residue or staples from the door panel's bottom face, using a putty knife or similar tool.

## STEP 3: PREPARE THE NEW DOOR BOTTOM

a. Measure the width of the door panel (X).

b. Measure and mark the same width (X) on the door bottom, measuring from one end. Cut the door bottom along this line.

## STEP 4: INSTALL THE NEW DOOR BOTTOM

a. Align one end of the door bottom with the door panel edge on the lock side.

b. Attach the door bottom with two 1/2" x 1/2" staples between the rigid ramps and flex fins, as shown above.

c. Continue stapling along the length of the door panel in 6 inch increments.

## STEP 5: RETURN THE DOOR PANEL TO THE FRAME - WE RECOMMEND HAVING ANOTHER PERSON ASSIST WITH THIS STEP

a. Realign the door panel with the hinges in the frame.

b. Reattach the hinges to the jamb with the screws. Confirm the door operates properly.
